ARROW ENGINE COMPANY EXPANDS OIL & GAS PRODUCT LINES

BLOOMFIELD HILLS, Michigan, March 19, 2009 – TriMas Corporation (NYSE: TRS) – a diversified manufacturer of engineered and applied products – today announced that Arrow Engine Company®, a TriMas company, has expanded its product lines to include a new solar pump and additional well-completion products for the oil and gas industry and other industrial markets.

Marketed to the oil and gas industry, Arrow's new solar chemical pump (Model SCP-1200A) is designed to introduce additive chemicals into the fuel production stream. The solar pump can be used at remote wellhead locations where traditional electrical service or natural gas to run a pump is not available or hard to obtain. Instead, Arrow's durable solar chemical pump is powered by a heavy-duty, long-life 12-volt battery that is continuously recharged by an 80-watt solar panel array.

In addition, Arrow has also expanded its line of well-completion products for the gas production market to include gas measurement products such as meter tubes, skid-mounted meter runs and packaged measurement stations that meet the latest specifications of the AGA (American Gas Association). Arrow added this complementary product group through the acquisition of assets and key personnel from Oklahoma-based Quinton Pearce Welding, LLC in the fourth quarter of 2008.

The products are engineered, designed and fabricated to meet customer application requirements, and remain in accordance to AGA specifications. Arrow's team of sales, engineering, and fabrication and measurement specialists bring technical expertise to assist customers with the design, measurement needs and fabrication of these highly-engineered gas measurement products.

About Arrow Engine Company

Founded in 1955 and headquartered in Tulsa, Oklahoma, Arrow Engine provides a variety of engine replacement parts and accessory products, slow-speed engines, four and six cylinder engines, generator sets, compressors and chemical injector pumps for the oil and gas industry and other industrial markets.
