**COMPAC CORPORATION EXPANDS ITS PRODUCT LINE TO BETTER SERVE
METAL BUILDING INSULATION MARKET**

HACKETTSTOWN, N.J., July 27, 2006 – Compac Corporation – a global leader in providing custom solutions in coating, laminating and converting flexible substrates – recently introduced Compac #282, the latest addition to the company's line of pressure sensitive tapes, serving the metal building insulation market. Compac #282 is used for seam sealing and patching Compac's VR-10 faced metal building insulation and other insulation applications where VR-10 and other similar facings are involved.

Compac #282 features an aggressive, all-weather acrylic adhesive that bonds tightly and permanently when smoothed on the insulation-facing surface, providing a matched appearance and vapor retarder integrity, which prevents condensation of water vapor inside piping materials.

Compac #282 was developed within Compac's own state-of-the-art manufacturing facility and technical lab in New Jersey. Compac produces a variety of both pressure-sensitive tapes and insulation facings in the same facility.

About Compac

Established in 1968, Compac Corporation, a TriMas company, is a global leader in providing custom solutions in coating, laminating and converting flexible substrates. Compac specializes in and is one of the world's leading manufacturers of flame retardant, reinforced insulation vapor retarders (facings) and insulation tape products. The company is headquartered in Hackettstown, N.J.
